## 17.278.1 Detailed Description

Inhibitor C interface.

Definition in file [inhibitor.h](#).

## 17.278.2 Function Documentation

### 17.278.2.1 l4re\_inhibitor\_acquire()

```
L4_BEGIN_DECLS long l4re_inhibitor_acquire (
    l4_cap_idx_t cap,
    l4_umword_t id,
    char const * reason)
```

Acquire an inhibitor lock.

#### Parameters

|               |                                                                                        |
|---------------|----------------------------------------------------------------------------------------|
| <i>cap</i>    | Capability for the Inhibitor object (see <a href="#">L4Re::Inhibitor</a> )             |
| <i>id</i>     | ID of the inhibitor lock that shall be acquired.                                       |
| <i>reason</i> | Reason why the inhibitor lock is acquired. (Used for informing the user or debugging.) |

#### Returns

0 for success, <0 on error.

#### See also

[L4Re::Inhibitor::acquire\(\)](#).

References [L4\\_CV](#), and [L4\\_EXPORT](#).

### 17.278.2.2 l4re\_inhibitor\_next\_lock\_info()

```
long l4re_inhibitor_next_lock_info (
    l4_cap_idx_t cap,
    char * name,
    unsigned len,
    l4_mword_t current_id)
```

Get information for the next available inhibitor lock.

#### Parameters

|            |                                                                           |
|------------|---------------------------------------------------------------------------|
| <i>cap</i> | Capability to the Inhibitor object (see <a href="#">L4Re::Inhibitor</a> ) |
|------------|---------------------------------------------------------------------------|

|                         |                                                                                                 |
|-------------------------|-------------------------------------------------------------------------------------------------|
| <i>name</i>             | A pointer to a buffer for the name of the lock.                                                 |
| <i>len</i>              | The length of the available buffer (usually <a href="#">L4Re::Inhibitor::Name_max</a> is used). |
| <i>current↔<br/>_id</i> | The ID of the last available lock, use -1 to get the first lock.                                |

**Return values**

|                   |                                                                                                                     |
|-------------------|---------------------------------------------------------------------------------------------------------------------|
| <i>&gt;0</i>      | The ID of the next available lock if there is one (in this case name shall contain the name of the inhibitor lock). |
| <i>-L4_ENODEV</i> | if there are no more locks.                                                                                         |
| <i>&lt;0</i>      | Any other negative failure value.                                                                                   |

**17.278.2.3 l4re\_inhibitor\_release()**

```
long l4re_inhibitor_release (
    l4_cap_idx_t cap,
    l4_umword_t id)
```

Release an inhibitor lock.

**Parameters**

|            |                                                                             |
|------------|-----------------------------------------------------------------------------|
| <i>cap</i> | Capability for the Inhibitor object (see <a href="#">L4Re::Inhibitor</a> ). |
| <i>id</i>  | ID of inhibitor that shall be released.                                     |

**Returns**

0 for success, <0 on error.

Include dependency graph for `parent.h`:

## Functions

- `L4_BEGIN_DECLS` long `l4re_parent_signal` (`l4_cap_idx_t` parent, unsigned long sig, unsigned long val)  
Send a signal using the parent protocol.

### 17.286.1 Detailed Description

Parent C interface.

Definition in file [parent.h](#).

### 17.286.2 Function Documentation

#### 17.286.2.1 `l4re_parent_signal()`

```

L4_BEGIN_DECLS long l4re_parent_signal (
    l4_cap_idx_t parent,
    unsigned long sig,
    unsigned long val)

```

Send a signal using the parent protocol.

#### Parameters

|               |                                               |
|---------------|-----------------------------------------------|
| <i>parent</i> | Capability index of parent to send signal to. |
| <i>sig</i>    | Signal to send                                |
| <i>val</i>    | Value of the signal                           |

#### Return values

|   |         |
|---|---------|
| 0 | Success |
|---|---------|

|    |           |
|----|-----------|
| <0 | IPC error |
|----|-----------|

## 17.290 l4/re/c/util/cap\_alloc.h File Reference

Capability allocator C interface.

```

#include <l4/sys/types.h>
#include <l4/sys/linkage.h>

```

Include dependency graph for `cap_alloc.h`:

## Functions

- `L4_BEGIN_DECLS l4_cap_idx_t l4re_util_cap_alloc (void) L4_NOTHROW`  
Get free capability index at capability allocator.
- `void l4re_util_cap_free (l4_cap_idx_t cap) L4_NOTHROW`  
Return capability index to capability allocator.
- `void l4re_util_cap_free_um (l4_cap_idx_t cap) L4_NOTHROW`  
Return capability index to capability allocator, and unmaps the object.
- `long l4re_util_cap_last (void) L4_NOTHROW`  
Return last capability index the allocator can return.

## 17.290.1 Detailed Description

Capability allocator C interface.

Definition in file `cap_alloc.h`.

Allocate state area.

### 17.292.1 Detailed Description

Kumem allocator utility C interface.

Definition in file [kumem\\_alloc.h](#).

## 17.292.2 Function Documentation

### 17.292.2.1 l4re\_util\_kumem\_alloc()

```
L4_BEGIN_DECLS int l4re_util_kumem_alloc (
    l4_addr_t * mem,
    unsigned pages_order,
    l4_cap_idx_t task,
    l4_cap_idx_t rm)
```

Allocate state area.

#### Parameters

|     |                    |                                            |
|-----|--------------------|--------------------------------------------|
| out | <i>mem</i>         | Pointer to memory that has been allocated. |
|     | <i>pages_order</i> | Size to allocate, in log2 pages.           |
|     | <i>task</i>        | Task to use for allocation.                |
|     | <i>rm</i>          | Region manager to use for allocation.      |

#### Return values

|    |                       |
|----|-----------------------|
| 0  | for success           |
| <0 | error code on failure |

#### Note

The amount of kernel-user memory that can be allocated at once is limited by the used kernel implementation. The minimum allocatable amount is one page. A portable implementation should not depend on allocations greater than 16KiB to succeed.

#### Examples

[examples/sys/aliens/main.c](#), and [examples/sys/utcb-ipc/main.c](#).

## 17.314 l4/re/env.h File Reference

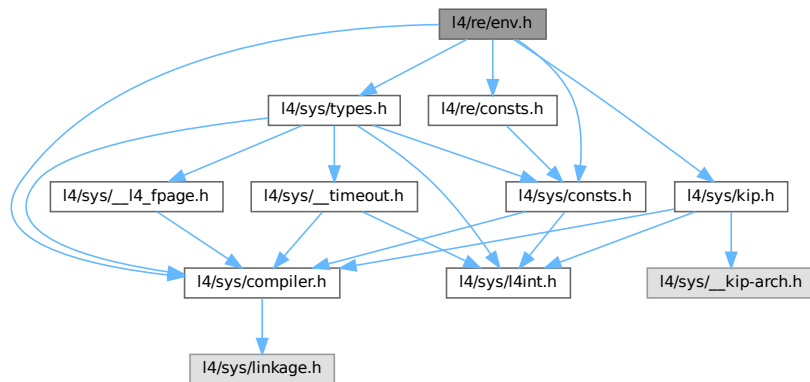

Environment interface.

```

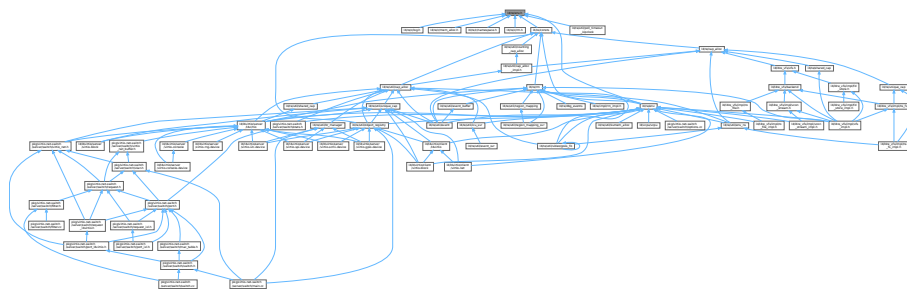

#include <l4/sys/consts.h>
#include <l4/sys/types.h>
#include <l4/sys/kip.h>
#include <l4/sys/compiler.h>
#include <l4/re/consts.h>

```

Include dependency graph for env.h:

This graph shows which files directly or indirectly include this file:

## Data Structures

- struct `l4re_env_cap_entry_t`  
Entry in the *L4Re* environment array for the named initial objects.
- struct `l4re_env_t`  
Initial environment data structure.

## Typedefs

- typedef struct `l4re_env_cap_entry_t` **`l4re_env_cap_entry_t`**  
Entry in the *L4Re* environment array for the named initial objects.
- typedef struct `l4re_env_t` **`l4re_env_t`**  
Initial environment data structure.

## Functions

- [l4re\\_env\\_t \\* l4re\\_env](#) (void) [L4\\_NOTHROW](#)  
*Get [L4Re](#) initial environment.*
- [l4\\_kernel\\_info\\_t](#) const \* [l4re\\_kip](#) (void) [L4\\_NOTHROW](#)  
*Get Kernel Info Page.*
- [l4\\_cap\\_idx\\_t](#) [l4re\\_env\\_get\\_cap](#) (char const \*name) [L4\\_NOTHROW](#)  
*Get the capability selector for the object named name.*
- [l4\\_cap\\_idx\\_t](#) [l4re\\_env\\_get\\_cap\\_e](#) (char const \*name, [l4re\\_env\\_t](#) const \*e) [L4\\_NOTHROW](#)  
*Get the capability selector for the object named name.*
- [l4re\\_env\\_cap\\_entry\\_t](#) const \* [l4re\\_env\\_get\\_cap\\_l](#) (char const \*name, unsigned l, [l4re\\_env\\_t](#) const \*e) [L4\\_NOTHROW](#)  
*Get the full [l4re\\_env\\_cap\\_entry\\_t](#) for the object named name.*

### 17.314.1 Detailed Description

Environment interface.

Definition in file [env.h](#).

### 17.314.2 Typedef Documentation

#### 17.314.2.1 [l4re\\_env\\_t](#)

```
typedef struct l4re_env_t l4re_env_t
```

Initial environment data structure.

## 17.410.1 Function Documentation

### 17.410.1.1 `l4shmc_rb_attach_receiver()`

```
void l4shmc_rb_attach_receiver (
    l4shmc_ringbuf_t * buf,
    l4_cap_idx_t owner)
```

Attach to receiver signal of a ring buffer.

Attach owner to the receiver-side signal of a ring buffer, which is triggered whenever new data has been produced.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

#### Parameters

|              |                               |
|--------------|-------------------------------|
| <i>buf</i>   | pointer to ring buffer struct |
| <i>owner</i> | owner thread                  |

References [L4\\_CV](#).

### 17.410.1.2 `l4shmc_rb_attach_sender()`

```
int l4shmc_rb_attach_sender (
    l4shmc_ringbuf_t * buf,
    char const * signal_name,
    l4_cap_idx_t owner)
```

Attach to sender signal of a ring buffer.

Attach owner to the sender-side signal of a ring buffer, which is triggered whenever new space has been freed in the buffer for the sender to write to.

This is split from initialization, because you may not know the owner cap when initializing the buffer.

#### Parameters

|            |                               |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

|                    |                  |
|--------------------|------------------|
| <i>signal_name</i> | signal base name |
| <i>owner</i>       | owner thread     |

#### Returns

0 on success, error otherwise

References [L4\\_CV](#).

#### 17.410.1.3 l4shmc\_rb\_deinit\_buffer()

```
void l4shmc_rb_deinit_buffer (  
    l4shmc_ringbuf_t * buf)
```

De-init a ring buffer.

#### Parameters

|            |                               |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

References [L4\\_CV](#).

#### 17.410.1.4 l4shmc\_rb\_init\_buffer()

```
int l4shmc_rb_init_buffer (  
    l4shmc_ringbuf_t * buf,  
    l4shmc_area_t * area,  
    char const * chunk_name,  
    char const * signal_name,  
    unsigned size)
```

Initialize a ring buffer by creating an SHMC chunk and the corresponding signals.

This needs to be done by one of the participating parties when setting up communication channel.

#### Precondition

area has been attached using [l4shmc\\_attach\(\)](#).

#### Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <i>buf</i>         | pointer to ring buffer struct        |
| <i>area</i>        | pointer to SHMC area                 |
| <i>chunk_name</i>  | name of SHMC chunk to create in area |
| <i>signal_name</i> | base name for SHMC signals to create |
| <i>size</i>        | chunk size                           |

#### Returns

0 on success, error otherwise

References [L4\\_CV](#).

#### 17.410.1.5 l4shmc\_rb\_init\_receiver()

```
int l4shmc_rb_init_receiver (
    l4shmc_ringbuf_t * buf,
    l4shmc_area_t * area,
    char const * chunk_name,
    char const * signal_name)
```

Initialize receive buffer.

Initialize the receiver-side of a ring buffer. This requires the underlying SHMC chunk and the corresponding signals to be valid already (read: to be initialized by the sender).

##### Precondition

chunk & signals have been created and initialized by the sender side

##### Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <i>buf</i>         | pointer to ring buffer struct        |
| <i>area</i>        | pointer to SHMC area                 |
| <i>chunk_name</i>  | name of SHMC chunk to create in area |
| <i>signal_name</i> | base name for SHMC signals to create |

##### Returns

0 on success, error otherwise

References [L4\\_CV](#).

#### 17.410.1.6 l4shmc\_rb\_receiver\_copy\_out()

```
int l4shmc_rb_receiver_copy_out (
    l4shmc_ringbuf_head_t * head,
    char * target,
    unsigned * tsize)
```

Copy data out of the buffer.

##### Parameters

|                |               |                                                                                  |
|----------------|---------------|----------------------------------------------------------------------------------|
|                | <i>head</i>   | ring buffer head pointer                                                         |
|                | <i>target</i> | valid target buffer                                                              |
| <i>in, out</i> | <i>tsize</i>  | size of target buffer (must be $\geq$ packet size!); contains the real data size |

##### Returns

0 on success, negative error otherwise

References [L4\\_CV](#).

### 17.410.1.7 l4shmc\_rb\_receiver\_notify\_done()

```
void l4shmc_rb_receiver_notify_done (  
    l4shmc_ringbuf_t * buf)
```

Notify producer that space is available.

#### Parameters

|            |                               |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

References [L4\\_CV](#).

### 17.410.1.8 l4shmc\_rb\_receiver\_read\_next\_size()

```
int l4shmc_rb_receiver_read_next_size (  
    l4shmc_ringbuf_head_t * head)
```

Have a look at the ring buffer and see which size the next packet to be read has.

Does not modify anything.

#### Returns

size of next buffer or -1 if no data available

References [L4\\_CV](#), and [L4\\_END\\_DECLS](#).

### 17.410.1.9 l4shmc\_rb\_receiver\_wait\_for\_data()

```
int l4shmc_rb_receiver_wait_for_data (  
    l4shmc_ringbuf_t * buf,  
    int blocking)
```

Check if (and optionally block until) new data is ready.

#### Parameters

|                 |                                            |
|-----------------|--------------------------------------------|
| <i>buf</i>      | pointer to ring buffer struct              |
| <i>blocking</i> | block if data is not available immediately |

Returns immediately, if data is available.

#### Returns

0 success, data available, != 0 otherwise

References [L4\\_CV](#).

### 17.410.1.10 l4shmc\_rb\_sender\_alloc\_packet()

```
char * l4shmc_rb_sender_alloc_packet (  
    l4shmc_ringbuf_head_t * head,  
    unsigned psize)
```

Allocate a packet of a given size within the ring buffer.

This packet may wrap around at the end of the buffer. Users need to be aware of that.

#### Parameters

|             |                          |
|-------------|--------------------------|
| <i>head</i> | ring buffer head pointer |
|-------------|--------------------------|

|              |             |
|--------------|-------------|
| <i>psize</i> | packet size |
|--------------|-------------|

**Returns**

valid address on success

**Return values**

|             |                               |
|-------------|-------------------------------|
| <i>NULL</i> | if not enough space available |
|-------------|-------------------------------|

References [L4\\_CV](#).

**17.410.1.11 l4shmc\_rb\_sender\_commit\_packet()**

```
void l4shmc_rb_sender_commit_packet (  
    l4shmc_ringbuf_t * buf)
```

Tell the consumer that new data is available.

**Parameters**

|            |                               |
|------------|-------------------------------|
| <i>buf</i> | pointer to ring buffer struct |
|------------|-------------------------------|

References [L4\\_CV](#).

**17.410.1.12 l4shmc\_rb\_sender\_next\_copy\_in()**

```
int l4shmc_rb_sender_next_copy_in (  
    l4shmc_ringbuf_t * buf,  
    char * data,  
    unsigned size,  
    int block_if_necessary)
```

Copy in packet from an external data source.

This is the function you'll want to use. Just pass it a buffer pointer and let the lib do the work.

**Parameters**

|                           |                                      |
|---------------------------|--------------------------------------|
| <i>buf</i>                | pointer to ring buffer struct        |
| <i>data</i>               | valid buffer                         |
| <i>size</i>               | data size                            |
| <i>block_if_necessary</i> | bool: block if buffer currently full |

**Return values**

|          |            |
|----------|------------|
| <i>0</i> | on success |
|----------|------------|

|                         |                                          |
|-------------------------|------------------------------------------|
| <code>-L4_ENOMEM</code> | if block == false and no space available |
|-------------------------|------------------------------------------|

References [L4\\_CV](#).

### 17.410.1.13 l4shmc\_rb\_sender\_put\_data()

```
void l4shmc_rb_sender_put_data (
    l4shmc_ringbuf_t * buf,
    char * addr,
    char * data,
    unsigned dsize)
```

Copy data into a previously allocated packet.

This function is wrap-around aware.

#### Parameters

|              |                                                                |
|--------------|----------------------------------------------------------------|
| <i>buf</i>   | pointer to ring buffer struct                                  |
| <i>addr</i>  | valid destination (allocate with <code>alloc_packet()</code> ) |
| <i>data</i>  | data source                                                    |
| <i>dsize</i> | data size                                                      |

## 17.414 l4/sigma0/sigma0.h File Reference

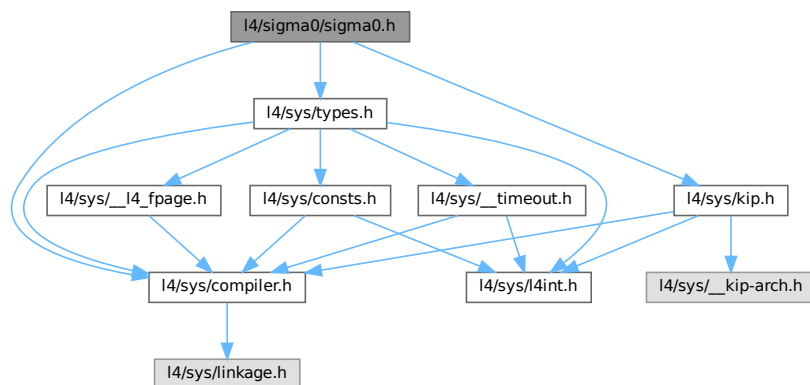

Sigma0 interface.

```

#include <l4/sys/compiler.h>
#include <l4/sys/types.h>
#include <l4/sys/kip.h>

```

Include dependency graph for sigma0.h:

### Macros

- **#define SIGMA0\_REQ\_MAGIC** ~0xFFUL  
*Request magic.*
- **#define SIGMA0\_REQ\_MASK** ~0xFFUL  
*Request mask.*
- **#define SIGMA0\_REQ\_ID\_MASK** 0xF0  
*ID mask.*
- **#define SIGMA0\_REQ\_ID\_FPAGE\_RAM** 0x60

- RAM.
- #define **SIGMA0\_REQ\_ID\_FPAGE\_IOMEM** 0x70  
I/O memory.
- #define **SIGMA0\_REQ\_ID\_FPAGE\_IOMEM\_CACHED** 0x80  
Cached I/O memory.
- #define **SIGMA0\_REQ\_ID\_FPAGE\_ANY** 0x90  
Any.
- #define **SIGMA0\_REQ\_ID\_KIP** 0xA0  
KIP.
- #define **SIGMA0\_REQ\_ID\_DEBUG\_DUMP** 0xC0  
Debug dump.
- #define **SIGMA0\_IS\_MAGIC\_REQ**(d1)  
Check if magic.
- #define **SIGMA0\_REQ**(x)  
Construct.
- #define **SIGMA0\_REQ\_FPAGE\_RAM** (**SIGMA0\_REQ**(FPAGE\_RAM))  
RAM.
- #define **SIGMA0\_REQ\_FPAGE\_IOMEM** (**SIGMA0\_REQ**(FPAGE\_IOMEM))  
I/O memory.
- #define **SIGMA0\_REQ\_FPAGE\_IOMEM\_CACHED** (**SIGMA0\_REQ**(FPAGE\_IOMEM\_CACHED))  
Cache I/O memory.
- #define **SIGMA0\_REQ\_FPAGE\_ANY** (**SIGMA0\_REQ**(FPAGE\_ANY))  
Any.
- #define **SIGMA0\_REQ\_KIP** (**SIGMA0\_REQ**(KIP))  
KIP.
- #define **SIGMA0\_REQ\_DEBUG\_DUMP** (**SIGMA0\_REQ**(DEBUG\_DUMP))  
Debug dump.

## Enumerations

- enum **l4sigma0\_return\_flags\_t** {  
L4SIGMA0\_OK , L4SIGMA0\_NOTALIGNED , L4SIGMA0\_IPCERROR , L4SIGMA0\_NOFPAGE ,  
L4SIGMA0\_4 , L4SIGMA0\_5 , L4SIGMA0\_SMALLERFPAGE }  
Return flags of libsigma0 functions.

## Functions

- **L4\_BEGIN\_DECLS** **l4\_kernel\_info\_t** \* **l4sigma0\_map\_kip** (**l4\_cap\_idx\_t** sigma0, void \*addr, unsigned log2↵  
\_size)  
Map the kernel info page from sigma0 to addr.
- int **l4sigma0\_map\_mem** (**l4\_cap\_idx\_t** sigma0, **l4\_addr\_t** phys, **l4\_addr\_t** virt, **l4\_addr\_t** size)  
Request a memory mapping from sigma0.
- int **l4sigma0\_map\_iomem** (**l4\_cap\_idx\_t** sigma0, **l4\_addr\_t** phys, **l4\_addr\_t** virt, **l4\_addr\_t** size, int cached)  
Request IO memory from sigma0.
- int **l4sigma0\_map\_anypage** (**l4\_cap\_idx\_t** sigma0, **l4\_addr\_t** map\_area, unsigned log2\_map\_size, **l4\_addr\_t** \*base, unsigned sz)  
Request an arbitrary free page of RAM.
- void **l4sigma0\_debug\_dump** (**l4\_cap\_idx\_t** sigma0)  
Request sigma0 to dump internal debug information.
- char const \* **l4sigma0\_map\_errstr** (int err)  
Get user readable error messages for the return codes.

## 17.417 l4/sys/\_\_ktrace-impl.h File Reference

L4 kernel event tracing.

```

#include <l4/sys/types.h>
#include <l4/sys/kdebug.h>

```

Include dependency graph for `__ktrace-impl.h`:

This graph shows which files directly or indirectly include this file:

## Functions

- `l4_umword_t fiasco_tbuf_log` (const char \*text)  
Create new trace-buffer entry with describing <text>.
- `l4_umword_t fiasco_tbuf_log_3val` (const char \*text, `l4_umword_t` v1, `l4_umword_t` v2, `l4_umword_t` v3)  
Create new trace-buffer entry with describing <text> and three additional values.
- void `fiasco_tbuf_clear` (void)  
Clear trace-buffer.
- void `fiasco_tbuf_dump` (void)  
Dump trace-buffer to kernel console.
- `l4_umword_t fiasco_tbuf_log_binary` (const unsigned char \*data)  
Create new trace-buffer entry with binary data.

Cache-consistency functions.

```
#include <l4/sys/compiler.h>
Include dependency graph for cache.h:
```

### Functions

- [L4\\_BEGIN\\_DECLS](#) `int l4_cache_clean_data` (unsigned long start, unsigned long end) [L4\\_NOTHROW](#)  
Cache clean a range in D-cache; writes back to PoC.
- `int l4_cache_flush_data` (unsigned long start, unsigned long end) [L4\\_NOTHROW](#)  
Cache flush a range; writes back to PoC.
- `int l4_cache_inv_data` (unsigned long start, unsigned long end) [L4\\_NOTHROW](#)  
Cache invalidate a range; might write back to PoC.
- `int l4_cache_coherent` (unsigned long start, unsigned long end) [L4\\_NOTHROW](#)  
Make memory coherent between I-cache and D-cache; writes back to PoU.
- `int l4_cache_dma_coherent` (unsigned long start, unsigned long end) [L4\\_NOTHROW](#)  
Make memory coherent for use with external memory; writes back to PoC.
- `int l4_cache_dma_coherent_full` (void) [L4\\_NOTHROW](#)  
Make memory coherent for use with external memory; writes back to PoC.

## 17.440.1 Detailed Description

Cache-consistency functions.

Definition in file [capability](#).

## 17.444.2 Macro Definition Documentation

### 17.444.2.1 [L4\\_DISABLE\\_COPY](#)

```
#define L4\_DISABLE\_COPY(  
    _class)
```

#### Value:

```
public:
    _class(_class const &) = delete; \
    _class operator = (_class const &) = delete; \
private:
```

Disable copy of a class.

### Parameters

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| <code>_class</code> | Name of the class that shall not have value copy semantics. |
|---------------------|-------------------------------------------------------------|

The typical use of this is:

```
class Non_value
{
    L4\_DISABLE\_COPY(Non_value)
    ...
}
```

### Enumerations

- `enum`  
*Defaults for local thread priorities.*

### 17.454.1 Detailed Description

Constants.

Definition in file [consts.h](#).

## 17.454.2 Enumeration Type Documentation

### 17.454.2.1 anonymous enum

anonymous enum

Defaults for local thread priorities.

Priorities are to be seen as local. These are used by the loader and libpthread. They are to be understood as 'local', which means the actual priority of the thread (as seen by the kernel) is the base priority as defined by the scheduler plus the local priority.

## 17.466.1 Macro Definition Documentation

### 17.466.1.1 L4\_RPC\_DEF

```
#define L4_RPC_DEF(  
    name)
```

#### Value:

```
template struct L4::Ipc::Msg::Rpc_call \  
    <name##_t, name##_t::class_type, name##_t::ipc_type, name##_t::flags_type>
```

Generate the definition of an RPC stub.

#### Parameters

|             |                                                                                            |
|-------------|--------------------------------------------------------------------------------------------|
| <i>name</i> | The fully qualified method name to be implemented, this means <code>class::method</code> . |
|-------------|--------------------------------------------------------------------------------------------|

This macro generates the definition (implementation) for the given RPC interface method.

Definition at line 32 of file [ipc\\_client](#).

### Data Structures

- struct [L4::ipc::Call](#)

- RPC attribute for a standard RPC call.*
  - struct [L4::lpc::Call\\_zero\\_send\\_timeout](#)
*RPC attribute for an RPC call, with zero send timeout.*
  - struct [L4::lpc::Call\\_t< RIGHTS >](#)
*RPC attribute for an RPC call with required rights.*
  - struct [L4::lpc::Send\\_only](#)
*RPC attribute for a send-only RPC.*

## Namespaces

- namespace [L4](#)
  - [L4](#) low-level kernel interface.
- namespace [L4::lpc](#)
  - IPC related functionality.
- namespace [L4::lpc::Msg](#)
  - IPC Message related functionality.

## Macros

- #define [L4\\_INLINE\\_RPC\\_NF](#)(res, name, args...)
  - Define an inline RPC call type (the type only, no callable).
- #define [L4\\_INLINE\\_RPC\\_NF\\_OP](#)(op, res, name, args...)
  - Define an inline RPC call type with specific opcode (the type only, no callable).
- #define [L4\\_INLINE\\_RPC](#)(res, name, args, attr...)
  - Define an inline RPC call (type and callable).
- #define [L4\\_INLINE\\_RPC\\_OP](#)(op, res, name, args, attr...)
  - Define an inline RPC call with specific opcode (type and callable).
- #define [L4\\_RPC\\_NF](#)(res, name, args...)
  - Define an RPC call type (the type only, no callable).
- #define [L4\\_RPC\\_NF\\_OP](#)(op, res, name, args...)
  - Define an RPC call type with specific opcode (the type only, no callable).
- #define [L4\\_RPC](#)(res, name, args, attr...)
  - Define an RPC call (type and callable).
- #define [L4\\_RPC\\_OP](#)(op, res, name, args, attr...)
  - Define an RPC call with specific opcode (type and callable).

## 17.469.2 Macro Definition Documentation

### 17.469.2.1 L4\_INLINE\_RPC

```
#define L4_INLINE_RPC(
    res,
    name,
    args,
    attr...)

```

#### Value:

res name args

Define an inline RPC call (type and callable).

#### Parameters

|             |                                                                                                  |
|-------------|--------------------------------------------------------------------------------------------------|
| <i>res</i>  | The result type of the RPC call                                                                  |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                  |
| <i>args</i> | The argument list of the RPC function.                                                           |
| <i>attr</i> | Optional RPC attributes ( <a href="#">L4::lpc::Call</a> , <a href="#">L4::lpc::Call_t</a> etc.). |

#### Examples

[examples/clntsrv/src/shared.h](#).

Definition at line [482](#) of file [ipc\\_iface](#).

Referenced by [L4Re::Mem\\_alloc::info\(\)](#).

### 17.469.2.2 L4\_INLINE\_RPC\_NF

```
#define L4_INLINE_RPC_NF(
    res,
    name,
    args...)

```

#### Value:

```
struct name##_t : L4::IpC::Msg::Rpc_inline_call<name##_t, Class, res args> \
{ \
    typedef L4::IpC::Msg::Rpc_inline_call<name##_t, Class, res args> type; \
    L4_INLINE_RPC_SRV_FORWARD(name); \
}

```

Define an inline RPC call type (the type only, no callable).

#### Parameters

|             |                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| <i>res</i>  | The result type of the RPC call                                                                                                    |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                                                    |
| <i>args</i> | The argument list of the RPC function, and RPC attributes ( <a href="#">L4::lpc::Call</a> , <a href="#">L4::lpc::Call_t</a> etc.). |

Stubs generated by this macro can be used explicitly in custom wrapper methods that need to use the underlying RPC code and provide some higher level abstraction, for example with default arguments or extra argument conversion.

Definition at line [453](#) of file [ipc\\_iface](#).

### 17.469.2.3 L4\_INLINE\_RPC\_NF\_OP

```
#define L4_INLINE_RPC_NF_OP(
    op,
    res,
    name,
    args...)

```

**Value:**

```
struct name##_t : L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> \
{ \
    typedef L4::Ipc::Msg::Rpc_inline_call<name##_t, Class, res args> type; \
    enum { Opcode = (op) }; \
    L4_INLINE_RPC_SRV_FORWARD(name); \
}
```

Define an inline RPC call type with specific opcode (the type only, no callable).

**Parameters**

|             |                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| <i>op</i>   | The opcode number for this function                                                                                                |
| <i>res</i>  | The result type of the RPC call                                                                                                    |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                                                    |
| <i>args</i> | The argument list of the RPC function, and RPC attributes ( <a href="#">L4::Ipc::Call</a> , <a href="#">L4::Ipc::Call_t</a> etc.). |

Stubs generated by this macro can be used explicitly in custom wrapper methods that need to use the underlying RPC code and provide some higher level abstraction, for example with default arguments or extra argument conversion.

Definition at line 466 of file [ipc\\_iface](#).

### 17.469.2.4 L4\_INLINE\_RPC\_OP

```
#define L4_INLINE_RPC_OP(
    op,
    res,
    name,
    args,
    attr...)

```

**Value:**

```
res name args
```

Define an inline RPC call with specific opcode (type and callable).

**Parameters**

|             |                                                                                                  |
|-------------|--------------------------------------------------------------------------------------------------|
| <i>op</i>   | The opcode number for this function                                                              |
| <i>res</i>  | The result type of the RPC call                                                                  |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                  |
| <i>args</i> | The argument list of the RPC function.                                                           |
| <i>attr</i> | Optional RPC attributes ( <a href="#">L4::Ipc::Call</a> , <a href="#">L4::Ipc::Call_t</a> etc.). |

Definition at line 497 of file [ipc\\_iface](#).

### 17.469.2.5 L4\_RPC

```
#define L4_RPC(
    res,
    name,
    args,
    attr...)

```

#### Value:

res name args

Define an RPC call (type and callable).

#### Parameters

|             |                                                                                                  |
|-------------|--------------------------------------------------------------------------------------------------|
| <i>res</i>  | The result type of the RPC call                                                                  |
| <i>name</i> | The name of the function ( <code>name_t</code> is used for the type.)                            |
| <i>args</i> | The argument list of the RPC function.                                                           |
| <i>attr</i> | Optional RPC attributes ( <a href="#">L4::lpc::Call</a> , <a href="#">L4::lpc::Call_t</a> etc.). |

Definition at line 541 of file [ipc\\_iface](#).

Referenced by [L4Re::Dataspace::info\(\)](#).

### 17.469.2.6 L4\_RPC\_NF

```
#define L4_RPC_NF(
    res,
    name,
    args...)

```

#### Value:

```
struct name##_t : L4::IpC::Msg::Rpc_call<name##_t, Class, res args>
{
    typedef L4::IpC::Msg::Rpc_call<name##_t, Class, res args> type;
    L4_INLINE_RPC_SRV_FORWARD(name);
}
\
\
\
\
```

Define an RPC call type (the type only, no callable).

#### Parameters

|             |                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| <i>res</i>  | The result type of the RPC call                                                                                                    |
| <i>name</i> | The name of the function ( <code>name_t</code> is used for the type.)                                                              |
| <i>args</i> | The argument list of the RPC function, and RPC attributes ( <a href="#">L4::lpc::Call</a> , <a href="#">L4::lpc::Call_t</a> etc.). |

Definition at line 510 of file [ipc\\_iface](#).

Referenced by [L4Re::Dataspace::info\(\)](#).

**17.469.2.7 L4\_RPC\_NF\_OP**

```
#define L4_RPC_NF_OP (
    op,
    res,
    name,
    args...)

```

**Value:**

```
struct name##_t : L4::Rpc::Msg::Rpc_call<name##_t, Class, res args>
{
    typedef L4::Rpc::Msg::Rpc_call<name##_t, Class, res args> type;
    enum { Opcode = (op) };
    L4_INLINE_RPC_SRV_FORWARD(name);
}
\
\
\
\

```

Define an RPC call type with specific opcode (the type only, no callable).

**Parameters**

|             |                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| <i>op</i>   | The opcode number for this function                                                                                                |
| <i>res</i>  | The result type of the RPC call                                                                                                    |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                                                    |
| <i>args</i> | The argument list of the RPC function, and RPC attributes ( <a href="#">L4::Rpc::Call</a> , <a href="#">L4::Rpc::Call_t</a> etc.). |

Definition at line 525 of file [ipc\\_iface](#).

**17.469.2.8 L4\_RPC\_OP**

```
#define L4_RPC_OP (
    op,
    res,
    name,
    args,
    attr...)

```

**Value:**

```
res name args
```

Define an RPC call with specific opcode (type and callable).

**Parameters**

|             |                                                                                                  |
|-------------|--------------------------------------------------------------------------------------------------|
| <i>op</i>   | The opcode number for this function                                                              |
| <i>res</i>  | The result type of the RPC call                                                                  |
| <i>name</i> | The name of the function ( <i>name_t</i> is used for the type.)                                  |
| <i>args</i> | The argument list of the RPC function.                                                           |
| <i>attr</i> | Optional RPC attributes ( <a href="#">L4::Rpc::Call</a> , <a href="#">L4::Rpc::Call_t</a> etc.). |

## 17.473 I4/cxx/ipc\_server File Reference

IPC server loop.

[illegible]

- class `L4::Server_object`  
*Abstract server object to be used with `L4::Server` and `L4::Basic_registry`.*
- struct `L4::Server_object_t < IFACE, BASE >`  
*Base class (template) for server implementing server objects.*
- struct `L4::Server_object_x < Derived, IFACE, BASE >`  
*Helper class to implement p\_dispatch based server objects.*
- struct `L4::Irq_handler_object`  
*Server object base class for handling IRQ messages.*

- namespace **L4**  
*L4 low-level kernel interface.*

Definition in file [ipc\\_server](#).

#include "ipc_basics"
Include dependency graph for ipc_types:
```

This graph shows which files directly or indirectly include this file:

### Data Structures

- struct [L4::lpc::In\\_out< T >](#)  
Mark an argument as in-out argument.
- struct [L4::lpc::As\\_value< T >](#)  
Pass the argument as plain data value.
- struct [L4::lpc::Opt< T >](#)  
Attribute for defining an optional RPC argument.
- class [L4::lpc::Small\\_buf](#)

- *A receive item for receiving a single object capability.*
- class [L4::lpc::Gen\\_fpage](#)  
*Generic RPC base for typed message items.*
- class [L4::lpc::Snd\\_fpage](#)  
*Send item or return item.*
- class [L4::lpc::Rcv\\_fpage](#)  
*Non-small receive item.*
- class [L4::lpc::Cap< T >](#)  
*Capability type for RPC interfaces (see [L4 : :Cap<T>](#)).*

## Namespaces

- namespace [L4](#)  
*L4 low-level kernel interface.*
- namespace [L4::lpc](#)  
*IPC related functionality.*
- namespace [L4::lpc::Msg](#)  
*IPC Message related functionality.*

## Functions

- template<typename T>

## 17.483 l4/sys/cxx/types File Reference

This graph shows which files directly or indirectly include this file:

### Data Structures

- class [L4::Types::Flags< BITS\\_ENUM, UNDERLYING >](#)  
Template for defining typical *Flags* bitmaps.
- struct [L4::Types::Int\\_for\\_type< T >](#)  
Metafunction to get an integral type of the same size as *T*.
- struct [L4::Types::Flags\\_ops\\_t< DT >](#)  
Mixin class to define a set of friend bitwise operators on *DT*.
- struct [L4::Types::Flags\\_t< DT, T >](#)  
Template type to define a flags type with bitwise operations.
- struct [L4::Types::\\_\\_Add\\_rvalue\\_reference\\_helper< T, typename >](#)  
Helper template for [Add\\_rvalue\\_reference](#).
- struct [L4::Types::\\_\\_Add\\_rvalue\\_reference\\_helper< T, Void< T && > >](#)  
Helper template for [Add\\_rvalue\\_reference](#).
- struct [L4::Types::Add\\_rvalue\\_reference< T >](#)  
Create an rvalue reference of the given type.
- struct [L4::Types::Bool< V >](#)  
Boolean meta type.
- struct [L4::Types::False](#)  
*False* meta value.
- struct [L4::Types::True](#)  
*True* meta value.
- struct [L4::Types::Integral\\_constant< T, Value >](#)  
Wrapper for a static constant of the given type.
- struct [L4::Types::Is\\_enum< T >](#)  
Check whether the given type is an enumeration type.

- struct [L4::Types::\\_\\_Underlying\\_type\\_helper< T, bool >](#)  
*Helper template for [Underlying\\_type](#).*
- struct [L4::Types::\\_\\_Underlying\\_type\\_helper< T, false >](#)  
*Helper template for [Underlying\\_type](#).*
- struct [L4::Types::Underlying\\_type< T >](#)  
*Get an underlying type of an enumeration type.*
- struct [L4::Types::Same< A, B >](#)  
*Compare two data types for equality.*
- struct [Enum\\_bitops::Has\\_marker< typename, typename >](#)  
*Marker for the opt-in ADL function.*
- struct [Enum\\_bitops::Has\\_marker< T, Void< decltype\(enum\\_bitops\\_enable\(declval< T >\(\)\)\)> >](#)  
*Marker for the opt-in ADL function.*
- struct [Enum\\_bitops::Enable< T >](#)  
*Check whether the given enum type opts in for the bitwise operators.*

## Namespaces

## 17.495 l4/sys/factory.h File Reference

Common factory related definitions.

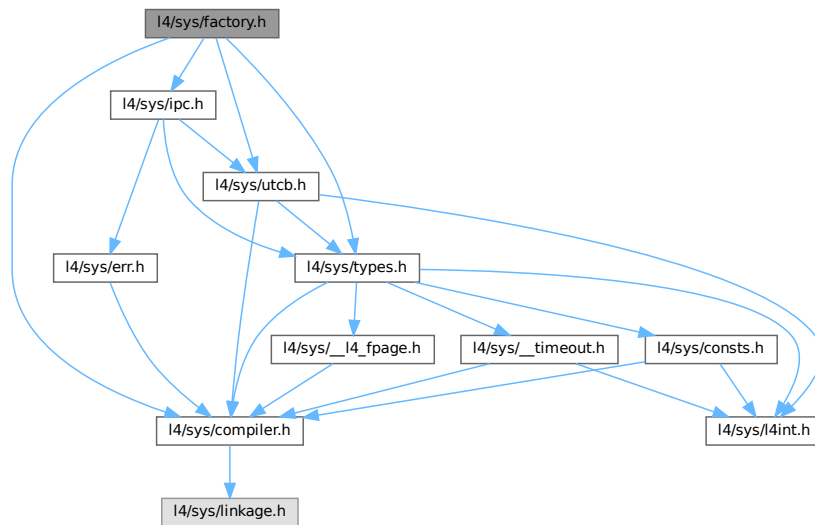

```

#include <l4/sys/compiler.h>
#include <l4/sys/types.h>

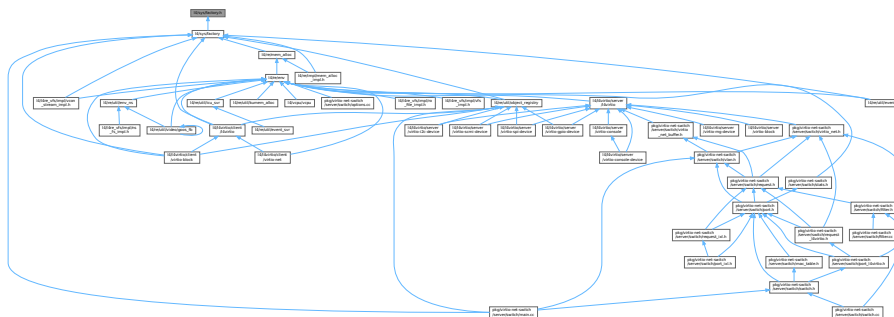

```

```
#include <l4/sys/utcb.h>
#include <l4/sys/ipc.h>
Include dependency graph for factory.h:
```

This graph shows which files directly or indirectly include this file:

## Functions

- `l4_msgtag_t l4_factory_create_task (l4_cap_idx_t factory, l4_cap_idx_t target_cap, l4_fpage_t *utcb_area)`  
L4\_NOTHROW  
Create a new task.
- `l4_msgtag_t l4_factory_create_thread (l4_cap_idx_t factory, l4_cap_idx_t target_cap)` L4\_NOTHROW  
Create a new thread.
- `l4_msgtag_t l4_factory_create_factory (l4_cap_idx_t factory, l4_cap_idx_t target_cap, unsigned long limit)`  
L4\_NOTHROW  
Create a new factory.
- `l4_msgtag_t l4_factory_create_gate (l4_cap_idx_t factory, l4_cap_idx_t target_cap, l4_cap_idx_t snd_dst_↔  
cap, l4_umword_t label)` L4\_NOTHROW  
Create a new IPC gate, optionally bound to a send destination (a thread or thread group).
- `l4_msgtag_t l4_factory_create_irq (l4_cap_idx_t factory, l4_cap_idx_t target_cap)` L4\_NOTHROW

*Create a new IRQ sender.*

- [l4\\_msgtag\\_t l4\\_factory\\_create\\_vm](#) ([l4\\_cap\\_idx\\_t](#) factory, [l4\\_cap\\_idx\\_t](#) target\_cap) [L4\\_NOTHROW](#)

*Create a new virtual machine.*

- [l4\\_msgtag\\_t l4\\_factory\\_create\\_vcpu\\_context](#) ([l4\\_cap\\_idx\\_t](#) factory, [l4\\_cap\\_idx\\_t](#) target\_cap) [L4\\_NOTHROW](#)

*Create a new vCPU context.*

- [l4\\_msgtag\\_t l4\\_factory\\_create\\_thread\\_group](#) ([l4\\_cap\\_idx\\_t](#) factory, [l4\\_cap\\_idx\\_t](#) target\_cap, unsigned policy) [L4\\_NOTHROW](#)

*Create a new thread group.*

- [l4\\_msgtag\\_t l4\\_factory\\_create](#) ([l4\\_cap\\_idx\\_t](#) factory, long obj, [l4\\_cap\\_idx\\_t](#) target) [L4\\_NOTHROW](#)

*Create a new object.*

*Error codes in the error TCR.*

## Functions

- `l4_umword_t l4_ipc_error(l4_msgtag_t tag, l4_utcb_t *utcb) L4_NOTHROW`  
*Get the IPC error code for an IPC operation.*
- `long l4_error(l4_msgtag_t tag) L4_NOTHROW`  
*Get IPC error code if any or message tag label otherwise for an IPC call.*
- `int l4_ipc_is_snd_error(l4_utcb_t *utcb) L4_NOTHROW`  
*Returns whether an error occurred in send phase of an invocation.*

- `int l4_ipc_is_rcv_error (l4_utcb_t *utcb) L4_NOTHROW`  
Returns whether an error occurred in receive phase of an invocation.
- `int l4_ipc_error_code (l4_utcb_t *utcb) L4_NOTHROW`  
Get the error condition of the last invocation from the TCR.
- `long l4_ipc_to_errno (unsigned long ipc_error_code) L4_NOTHROW`  
Get a negative error code for the given IPC error code.
- `l4_msgtag_t l4_ipc_send (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_msgtag_t tag, l4_timeout_t timeout) L4_NOTHROW`  
Send a message to an object (do **not** wait for a reply).
- `l4_msgtag_t l4_ipc_wait (l4_utcb_t *utcb, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW`  
Wait for an incoming message from any possible sender.
- `l4_msgtag_t l4_ipc_receive (l4_cap_idx_t object, l4_utcb_t *utcb, l4_timeout_t timeout) L4_NOTHROW`  
Wait for a message from a specific source.
- `l4_msgtag_t l4_ipc_call (l4_cap_idx_t object, l4_utcb_t *utcb, l4_msgtag_t tag, l4_timeout_t timeout) L4_NOTHROW`  
Object call (usual invocation).
- `l4_msgtag_t l4_ipc_reply_and_wait (l4_utcb_t *utcb, l4_msgtag_t tag, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW`  
Reply and wait operation (uses the reply capability).
- `l4_msgtag_t l4_ipc_send_and_wait (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_msgtag_t tag, l4_umword_t *label, l4_timeout_t timeout) L4_NOTHROW`  
Send a message and do an open wait.
- `l4_msgtag_t l4_ipc (l4_cap_idx_t dest, l4_utcb_t *utcb, l4_umword_t flags, l4_umword_t slabel, l4_msgtag_t tag, l4_umword_t *rlabel, l4_timeout_t timeout) L4_NOTHROW`  
Generic L4 object invocation.
- `l4_msgtag_t l4_ipc_sleep (l4_timeout_t timeout) L4_NOTHROW`  
Sleep for an amount of time.
- `l4_msgtag_t l4_ipc_sleep_ms (l4_uint32_t ms) L4_NOTHROW`  
Sleep for a certain amount of milliseconds.
- `l4_msgtag_t l4_ipc_sleep_us (l4_uint64_t us) L4_NOTHROW`  
Sleep for a certain amount of microseconds.
- `int l4_sndfpage_add (l4_fpage_t const snd_fpage, unsigned long snd_base, l4_msgtag_t *tag) L4_NOTHROW`  
Add a flexpage to be sent to the UTCB.

## 17.505.1 Detailed Description

Common IPC interface.

Definition in file [ipc.h](#).

## 17.505.2 Function Documentation

### 17.505.2.1 l4\_ipc\_to\_errno()

```
long l4_ipc_to_errno (
    unsigned long ipc_error_code) [inline]
```

Get a negative error code for the given IPC error code.

#### Parameters

|                             |                                                                                                               |
|-----------------------------|---------------------------------------------------------------------------------------------------------------|
| <code>ipc_error_code</code> | IPC error code as delivered by the kernel. (or returned by the <a href="#">l4_ipc_error_code()</a> function). |
|-----------------------------|---------------------------------------------------------------------------------------------------------------|

## Returns

negative error code in the range of [L4\\_EIPC\\_LO](#) to [L4\\_EIPC\\_HI](#).

Definition at line 561 of file [ipc.h](#).

References [L4\\_EIPC\\_LO](#), [L4\\_INLINE](#), and [L4\\_NOTHROW](#).

### 17.511.1 Detailed Description

The C IPC gate interface, see [L4::ipc\\_gate](#) for the C++ interface.

IPC gates are used to create secure communication channels between protection domains. An IPC gate can be created using the [Factory](#) interface.

Depending on the permissions of the capability used, an IPC gate forwards IPC to the [Thread](#) the IPC gate is *bound* to (cf. [l4\\_rcv\\_ep\\_bind\\_thread\(\)](#) and [l4\\_rcv\\_ep\\_bind\\_snd\\_destination\(\)](#)). If the capability has the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission, only IPC using a protocol different from the [L4\\_PROTO\\_KOBJECT](#) protocol is forwarded. Without the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission, all IPC is forwarded. The latter is the usual case for a client in a client/server scenario. When not bound to a thread or thread group yet, the forwarded IPC blocks until the IPC gate is bound to a thread or thread group, or the IPC times out.

Forwarded IPC is always forwarded to the userland of the thread the IPC gate is bound to, either directly or indirectly using a thread group. That means, the [Thread](#) interface of that thread is not accessible via an IPC gate. The [IPC-Gate API](#) of an IPC gate is only accessible if the capability used has the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission (cf. previous paragraph). Conversely that means, if the capability used lacks the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission, [IPC-Gate API](#) calls are forwarded to the thread or thread group the IPC gate is bound to instead of being processed by the IPC gate itself. In a client/server scenario, a client should only get IPC gate capabilities without [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission so the client cannot tamper with the IPC gate.

When binding an IPC gate to a thread or thread group, a user-defined, kernel protected, machine-word sized payload called the IPC gate's *label* is assigned to the IPC gate (note that the two least significant bits of the label must be zero; cf. [l4\\_rcv\\_ep\\_bind\\_thread\(\)](#) and [l4\\_rcv\\_ep\\_bind\\_snd\\_destination\(\)](#)). When a send-only IPC or call IPC is forwarded via an IPC gate, the label provided by the sender is ignored and replaced by the IPC gate's label where the two least significant bits are set to the [L4\\_CAP\\_FPAGE\\_S](#) and [L4\\_CAP\\_FPAGE\\_W](#) permissions of the capability used. The replaced label is only visible to the thread the IPC gate is bound to upon receive (or to the selected thread from the thread group the IPC gate is bound to). However, the configured label of an IPC gate can also be queried via [l4\\_ipc\\_gate\\_get\\_infos\(\)](#) if the capability used has the [L4\\_FPAGE\\_C\\_IPCGATE\\_SVR](#) permission.

When deleting an IPC gate or when unbinding it from a thread or thread group, the label of IPC already in flight won't be changed. To ensure that no IPC from this IPC gate is received by a thread with an unexpected label, [l4\\_thread\\_modify\\_sender\\_start\(\)](#) shall be used to change the labels of every pending IPC to that gate. This is also required if the label of an already bound IPC gate is changed. It is not necessary after binding the IPC gate to a thread or thread group for the first time.

When binding a currently bound IPC gate to a new thread or thread group, the same label should be used that was used with the old thread. Otherwise the old and the new thread need to synchronize to avoid IPC messages with unexpected labels.

#### Include File

```
#include <l4/sys/ipc_gate.h>
```

For the C++ interface refer to the [L4::ipc\\_gate](#) documentation.

#### See also

### 17.515.1 Detailed Description

Functionality for invoking the kernel debugger.

Definition in file [kdebug.h](#).

### 17.515.2 Enumeration Type Documentation

#### 17.515.2.1 l4\_kdebug\_ops\_t

```
enum l4_kdebug_ops_t
```

Op-codes for operations that can be invoked on the base debugger capability.

See also [\\_\\_ktrace-impl.h](#) for additional op-codes.

Definition at line 44 of file [kdebug.h](#).

### 17.515.3 Function Documentation

#### 17.515.3.1 \_\_l4\_kdebug\_3\_text()

```
l4_msgtag_t __l4_kdebug_3_text (
    unsigned op,
    char const * text,
    unsigned len,
    l4_umword_t v1,
    l4_umword_t v2,
    l4_umword_t v3) [inline]
```

Invoke a text output operation with 3 additional machine word arguments on the base debugger capability.

#### Parameters

|             |                                                                                                                                                                                   |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>op</i>   | Text output operation code from <a href="#">l4_kdebug_ops_t</a> or a value above 0x200 used by the kernel trace buffer implementation ( <a href="#">__ktrace-impl.h</a> ).        |
| <i>text</i> | Output string.                                                                                                                                                                    |
| <i>len</i>  | Length of the output string. The maximum length is limited to <a href="#">L4_UTCB_GENERIC_DATA_SIZE</a> - 5 machine words. Output strings longer than this limit will be cropped. |
| <i>v1</i>   | First machine word argument.                                                                                                                                                      |
| <i>v2</i>   | Second machine word argument.                                                                                                                                                     |
| <i>v3</i>   | Third machine word argument.                                                                                                                                                      |

#### Return values

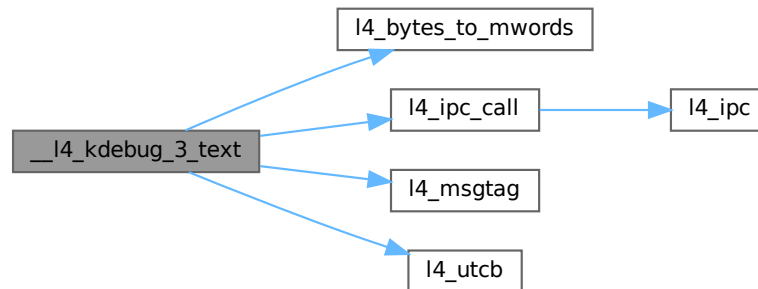

|                |                                                            |
|----------------|------------------------------------------------------------|
| <i>Message</i> | tag returned from the IPC on the base debugger capability. |

#### 17.515.3.4 `__l4_kdebug_text()`

```

l4_msgtag_t __l4_kdebug_text (
    unsigned op,
    char const * text,
    unsigned len) [inline]

```

Invoke a text output operation on the base debugger capability.

##### Parameters

|             |                                                                                                                                                                                   |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>op</i>   | Text output operation code from <a href="#">l4_kdebug_ops_t</a> or a value above 0x200 used by the kernel trace buffer implementation ( <a href="#">__ktrace-impl.h</a> ).        |
| <i>text</i> | Output string.                                                                                                                                                                    |
| <i>len</i>  | Length of the output string. The maximum length is limited to <a href="#">L4_UTCB_GENERIC_DATA_SIZE</a> - 2 machine words. Output strings longer than this limit will be cropped. |

**Return values**

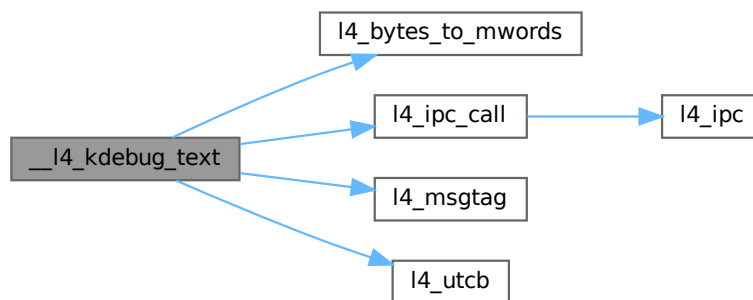

|                |                                                            |

Here is the caller graph for this function:

**17.515.3.5 l4\_kd\_enter()**

```
void l4_kd_enter (
    char const * text) [inline]
```

Enter the kernel debugger.

**Parameters**

|             |                                                                 |
|-------------|-----------------------------------------------------------------|
| <i>text</i> | Optional message displayed by the kernel debugger when entered. |
|-------------|-----------------------------------------------------------------|

Enter the kernel debugger, if configured. An optional message can be passed to the kernel debugger which is printed upon the entering of the debugger.

**Examples**

[examples/sys/singlestep/main.c](#).

Here is the call graph for this function:

**17.515.3.6 l4\_kd\_outchar()**

```
void l4_kd_outchar (
    char c) [inline]
```

Output a single character via the kernel debugger.

**Parameters**

|          |                   |
|----------|-------------------|
| <i>c</i> | Output character. |
|----------|-------------------|

Definition at line 245 of file [kdebug.h](#).

### 17.515.3.7 l4\_kd\_outdec()

```
void l4_kd_outdec (  
    l4_mword_t number) [inline]
```

Output a decimal unsigned machine word via the kernel debugger.

#### Parameters

|               |                      |
|---------------|----------------------|
| <i>number</i> | Output machine word. |
|---------------|----------------------|

Definition at line 334 of file [kdebug.h](#).

References [\\_\\_l4\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

**17.515.3.12 l4\_kd\_outhex64()**

```
void l4_kd_outhex64 (
    l4_uint64_t number) [inline]
```

Output a 64-bit unsigned hexadecimal number via the kernel debugger.

**Parameters**

|               |                       |
|---------------|-----------------------|
| <i>number</i> | Output 64-bit number. |
|---------------|-----------------------|

The two 32-bit halves are printed non-atomically.

Definition at line 273 of file [kdebug.h](#).

References [\\_\\_l4\\_kdebug\\_op\\_1\(\)](#), and [L4\\_INLINE](#).

### 17.515.3.16 l4\_kd\_outumword()

```
void l4_kd_outumword (
    l4_umword_t number) [inline]
```

Output a hexadecimal unsigned machine word via the kernel debugger.

#### Parameters

|               |                      |
|---------------|----------------------|
| <i>number</i> | Output machine word. |
|---------------|----------------------|

If the machine word is 64 bits long, it is printed non-atomically as two 32-bit numbers.

Functionality for dumping kernel information.

```
#include <l4/sys/kdebug.h>
```

Include dependency graph for kdump.h:

### Functions

- long [fiasco\\_dump\\_kmem\\_stats](#) (void)  
Dump kernel memory statistics on console.

### 17.517.1 Detailed Description

Functionality for dumping kernel information.

Definition in file [kdump.h](#).

### 17.517.2 Function Documentation

#### 17.517.2.1 fiasco\_dump\_kmem\_stats()

```
long fiasco_dump_kmem_stats (
    void ) [inline]
```

Dump kernel memory statistics on console.

#### Return values

|   |          |
|---|----------|
| 0 | Success. |
|---|----------|

|            |                            |
|------------|----------------------------|
| -L4_ENOSYS | Not implemented by kernel. |
|------------|----------------------------|

```

Include dependency graph for ktrace.h:

### Functions

- [l4\\_umword\\_t fiasco\\_tbuf\\_log](#) (const char \*text)  
Create new trace-buffer entry with describing <text>.
- [l4\\_umword\\_t fiasco\\_tbuf\\_log\\_3val](#) (const char \*text, [l4\\_umword\\_t](#) v1, [l4\\_umword\\_t](#) v2, [l4\\_umword\\_t](#) v3)

Create new trace-buffer entry with describing `<text>` and three additional values.

- `l4_umword_t fiasco_tbuf_log_binary` (const unsigned char \*data)

Create new trace-buffer entry with binary data.

- void `fiasco_tbuf_clear` (void)

Clear trace-buffer.

- void `fiasco_tbuf_dump` (void)

Dump trace-buffer to kernel console.

## 17.524.1 Detailed Description

[L4](#) kernel event tracing.

Definition in file [ktrace.h](#).

*Retrieve information from the kernel about all objects in the mapping database and write data to the passed KU memory.*

### 17.541.1 Detailed Description

Debugger related functions.

#### Attention

This API is subject to change!

Definition in file [obj\\_info.h](#).

## 17.541.2 Function Documentation

### 17.541.2.1 l4\_debugger\_query\_obj\_infos()

```
l4_msgtag_t l4_debugger_query_obj_infos (
    l4_cap_idx_t cap,
    l4_addr_t ku_mem_addr,
    l4_size_t ku_mem_size,
    l4_umword_t skip,
    l4_umword_t * result_cnt,
    l4_umword_t * result_all) [inline]
```

Retrieve information from the kernel about all objects in the mapping database and write data to the passed KU memory.

#### Parameters

|     |                    |                                                       |
|-----|--------------------|-------------------------------------------------------|
|     | <i>cap</i>         | Capability of the debugger object.                    |
|     | <i>ku_mem_addr</i> | Address of the KU memory for writing the information. |
|     | <i>ku_mem_size</i> | Size of the KU memory to writing the information.     |
|     | <i>skip</i>        | Number of objects to skip.                            |
| out | <i>result_cnt</i>  | Number of objects in the mapping database.            |
| out | <i>result_all</i>  | Number of objects written to the KU memory.           |

#### Note

The kernel will only write a number of object information which fits to the passed KU memory. To retrieve missing object information, repeat the call and adapt the *skip* parameter accordingly.

If this system call is performed several times, the number of kernel objects might have changed in the mean-time.

Definition at line 177 of file [obj\\_info.h](#).

```
#include <l4/sys/types.h>
```

```
#include <l4/sys/utcb.h>
```

```
#include <l4/sys/ipc.h>
```

Include dependency graph for thread\_group.h:

This graph shows which files directly or indirectly include this file:

### Functions

- `l4_msgtag_t l4_thread_group_add (l4_cap_idx_t tg, l4_cap_idx_t thread) L4_NOTHROW`  
Add thread to a thread group.
- `l4_msgtag_t l4_thread_group_remove (l4_cap_idx_t tg, l4_cap_idx_t thread) L4_NOTHROW`  
Remove thread from a thread group.

- [l4\\_cap\\_idx\\_t l4\\_capability\\_next](#) ([l4\\_cap\\_idx\\_t](#) c) [L4\\_NOTHROW](#)

*Get the next capability selector after c.*

## 17.586.1 Detailed Description

Common [L4](#) ABI Data Types.

Definition in file [types.h](#).

## 17.586.2 Function Documentation

### 17.586.2.1 l4\_capability\_next()

```
l4_cap_idx_t l4_capability_next (
    l4_cap_idx_t c) [inline]
```

Get the next capability selector after `c`.

#### Parameters

|                |                                                                        |
|----------------|------------------------------------------------------------------------|
| <code>c</code> | The capability selector for which the next selector shall be computed. |
|----------------|------------------------------------------------------------------------|

#### Returns

The next capability selector after `c`.

Definition at line 457 of file [types.h](#).

Input flags.
- enum `L4_vcon_o_flags` { `L4_VCON_ONLCR` = 000004 , `L4_VCON_OCRNL` = 000010 , `L4_VCON_ONLRET` = 000040 }  
Output flags.
- enum `L4_vcon_l_flags` { `L4_VCON_ICANON` = 000002 , `L4_VCON_ECHO` = 000010 }  
Local flags.
- enum `L4_vcon_ops` { `L4_VCON_WRITE_OP` = 0UL , `L4_VCON_READ_OP` = 1UL , `L4_VCON_SET_ATTR_OP` = 2UL , `L4_VCON_GET_ATTR_OP` = 3UL }  
Operations on vcon objects.

## Functions

- `l4_msgtag_t l4_vcon_send (l4_cap_idx_t vcon, char const *buf, unsigned size)` `L4_NOTHROW`  
Send data to virtual console.
- `l4_msgtag_t l4_vcon_send_u (l4_cap_idx_t vcon, char const *buf, unsigned size, l4_utcb_t *utcb)` `L4_NOTHROW`  
Send data to *this* virtual console.
- `long l4_vcon_write (l4_cap_idx_t vcon, char const *buf, unsigned size)` `L4_NOTHROW`  
Write data to virtual console.
- `long l4_vcon_write_u (l4_cap_idx_t vcon, char const *buf, unsigned size, l4_utcb_t *utcb)` `L4_NOTHROW`  
Write data to *this* virtual console.
- `int l4_vcon_read (l4_cap_idx_t vcon, char *buf, unsigned size)` `L4_NOTHROW`  
Read data from virtual console.
- `int l4_vcon_read_u (l4_cap_idx_t vcon, char *buf, unsigned size, l4_utcb_t *utcb)` `L4_NOTHROW`  
Read data from *this* virtual console.
- `int l4_vcon_read_with_flags (l4_cap_idx_t vcon, char *buf, unsigned size)` `L4_NOTHROW`  
Read data from virtual console, extended version including flags.
- `l4_msgtag_t l4_vcon_set_attr (l4_cap_idx_t vcon, l4_vcon_attr_t const *attr)` `L4_NOTHROW`  
Set attributes of a Vcon.
- `l4_msgtag_t l4_vcon_set_attr_u (l4_cap_idx_t vcon, l4_vcon_attr_t const *attr, l4_utcb_t *utcb)` `L4_NOTHROW`  
Set the attributes of *this* virtual console.
- `l4_msgtag_t l4_vcon_get_attr (l4_cap_idx_t vcon, l4_vcon_attr_t *attr)` `L4_NOTHROW`  
Get attributes of a Vcon.
- `l4_msgtag_t l4_vcon_get_attr_u (l4_cap_idx_t vcon, l4_vcon_attr_t *attr, l4_utcb_t *utcb)` `L4_NOTHROW`  
Get attributes of *this* virtual console.
- `void l4_vcon_set_attr_raw (l4_vcon_attr_t *attr)` `L4_NOTHROW`  
Set terminal attributes to disable all special processing.

## 17.600.1 Detailed Description

Virtual console interface.

Definition in file [vcon.h](#).

## 17.600.2 Enumeration Type Documentation

### 17.600.2.1 L4\_vcon\_read\_flags

enum [L4\\_vcon\\_read\\_flags](#)

Vcon read flags.

#### Enumerator

|                         |                       |
|-------------------------|-----------------------|
| L4_VCON_READ_SIZE_MASK  | Size mask.            |
| L4_VCON_READ_STAT_BREAK | Break condition flag. |
| L4_VCON_READ_STAT_DONE  | Done condition flag.  |

Definition at line 170 of file [vcon.h](#).

Functions

- `L4_BEGIN_DECLS` `int` `l4util_backtrace` (`void **pc_array`, `int max_len`)  
*Fill backtrace structure.*

17.618.1 Detailed Description

Backtrace.

Definition in file `backtrace.h`.

17.618.2 Function Documentation

17.618.2.1 `l4util_backtrace()`

```
L4_BEGIN_DECLS
int l4util_backtrace (
    void ** pc_array,
    int max_len)

```

Fill backtrace structure.

Parameters

|                       |                                |
|-----------------------|--------------------------------|
| <code>pc_array</code> | Array of instruction pointers. |
| <code>max_len</code>  | Length of array.               |

### Returns

Number of entries

References [L4\\_END\\_DECLS](#).

## 17.622 l4/util/bitops.h File Reference

bit manipulation functions

```

#include <l4/sys/l4int.h>
#include <l4/sys/compiler.h>
#include <l4/util/bitops_arch.h>
#include <l4/util/atomic.h>

```

Include dependency graph for bitops.h:

This graph shows which files directly or indirectly include this file:

## Macros

- `#define I4util_test_and_clear_bit(b, dest)`  
*define some more usual names*

## Functions

- void `I4util_set_bit` (int b, volatile `I4_umword_t` \*dest)  
*Set bit in memory.*
- void `I4util_clear_bit` (int b, volatile `I4_umword_t` \*dest)  
*Clear bit in memory.*
- void `I4util_complement_bit` (int b, volatile `I4_umword_t` \*dest)  
*Complement bit in memory.*
- int `I4util_test_bit` (int b, const volatile `I4_umword_t` \*dest)  
*Test bit (return value of bit).*
- int `I4util_bts` (int b, volatile `I4_umword_t` \*dest)  
*Bit test and set.*
- int `I4util_btr` (int b, volatile `I4_umword_t` \*dest)  
*Bit test and reset.*
- int `I4util_btc` (int b, volatile `I4_umword_t` \*dest)  
*Bit test and complement.*
- int `I4util_bsr` (`I4_umword_t` word)  
*Bit scan reverse.*
- int `I4util_bsf` (`I4_umword_t` word)  
*Bit scan forward.*
- int `I4util_find_first_set_bit` (const void \*dest, `I4_size_t` size)  
*Find the first set bit in a memory region.*
- int `I4util_find_first_zero_bit` (const void \*dest, `I4_size_t` size)  
*Find the first zero bit in a memory region.*
- int `I4util_next_power2` (unsigned long val)  
*Find the next power of 2 for a given number.*

## 17.622.1 Detailed Description

### 17.630.1 Detailed Description

Kernel Info Page access functions.

Definition in file [kip.h](#).

## 17.630.2 Macro Definition Documentation

### 17.630.2.1 l4\_kip\_for\_each\_feature

```
#define l4_kip_for_each_feature(  
    s)
```

**Value:**

```
for (s += __builtin_strlen(s) + 1; *s; s += __builtin_strlen(s) + 1)
```

Cycle through kernel features given in the KIP.

Cycles through all KIP kernel feature strings. *s* must be a character pointer (`char const *`) initialized with [l4\\_kip\\_version\\_string\(\)](#).

Definition at line 272 of file [kip.h](#).

Referenced by [l4\\_kip\\_kernel\\_has\\_feature\(\)](#).

## 17.630.3 Function Documentation

### 17.630.3.1 l4\_kip\_kernel\_has\_feature()

```
int l4_kip_kernel_has_feature (  
    l4_kernel_info_t const * kip,  
    char const * str) [inline]
```

Check if kernel supports a feature.

**Parameters**

|            |                                        |
|------------|----------------------------------------|
| <i>kip</i> | Pointer to the kernel info page (KIP). |
| <i>str</i> | Feature name to check.                 |

**Returns**

1 if the kernel supports the feature, 0 if not.

Checks the feature field in the KIP for the given string.

Definition at line 286 of file [kip.h](#).

References [l4\\_kip\\_for\\_each\\_feature](#), and [l4\\_kip\\_version\\_string\(\)](#).

Here is the call graph for this function:

#include <l4/sys/compiler.h>
Include dependency graph for kip.h:
```

### Macros

- `#define l4util_kip_for_each_feature(s)`  
Cycle through kernel features given in the KIP.

### Functions

- `L4_BEGIN_DECLS int l4util_kip_kernel_has_feature (l4_kernel_info_t const *k, char const *str)`  
Check if kernel supports a feature.
- `unsigned long l4util_kip_kernel_abi_version (l4_kernel_info_t const *k)`  
Return kernel ABI version.

### 17.638.1 Detailed Description

Simple list-based allocator.

Taken from the Fiasco kernel.

#### Date

Alexander Warg <aw11os.inf.tu-dresden.de> Frank Mehnert [fm3@os.inf.tu-dresden.de](mailto:fm3@os.inf.tu-dresden.de)

Definition in file [list\\_alloc.h](#).

## 17.638.2 Function Documentation

### 17.638.2.1 l4la\_alloc()

```
void * l4la_alloc (
    l4la_free_t ** first,
    l4_size_t size,
    unsigned align)
```

Allocate memory from pool.

#### Parameters

|              |                                    |
|--------------|------------------------------------|
| <i>first</i> | list identifier                    |
| <i>size</i>  | length of memory block to allocate |
| <i>align</i> | alignment                          |

References [L4\\_CV](#).

### 17.638.2.2 l4la\_avail()

```
l4_size_t l4la_avail (
    l4la_free_t ** first)
```

Show available memory in pool.

#### Parameters

|              |                 |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

References [L4\\_CV](#), and [L4\\_END\\_DECLS](#).

### 17.638.2.3 l4la\_dump()

```
void l4la_dump (
    l4la_free_t ** first)
```

Show all list members.

#### Parameters

|              |                 |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

References [L4\\_CV](#).

### 17.638.2.4 l4la\_free()

```
L4_BEGIN_DECLS void l4la_free (
    l4la_free_t ** first,
    void * block,
    l4_size_t size)
```

Add free memory to memory pool.

#### Parameters

|              |                 |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

|              |                                |
|--------------|--------------------------------|
| <i>block</i> | address of unused memory block |
| <i>size</i>  | size of memory block           |

References [L4\\_CV](#).

### 17.638.2.5 l4la\_init()

```
void l4la_init (
    l4la_free_t ** first)
```

Init memory pool.

#### Parameters

|              |                 |
|--------------|-----------------|
| <i>first</i> | list identifier |
|--------------|-----------------|

References [L4\\_CV](#).

## 17.640 I4/util/lock.h File Reference

Simple lock implementation.

```
#include <l4/sys/thread.h>
#include <l4/sys/compiler.h>
#include <l4/util/atomic.h>
```

Include dependency graph for lock.h:

### 17.640.1 Detailed Description

Simple lock implementation.

Does only work if all thread have the same priority!

Date

02/1997

Author

Michael Hohmuth [hohmuth@os.inf.tu-dresden.de](mailto:hohmuth@os.inf.tu-dresden.de)

### 17.642.1 Detailed Description

Multiboot info structure as defined by GRUB.

Definition in file [mb\\_info.h](#).

### 17.642.2 Macro Definition Documentation

#### 17.642.2.1 l4util\_mb\_for\_each\_mmap\_entry

```
#define l4util_mb_for_each_mmap_entry(  
    i,  
    mbi)
```

**Value:**

```
for (i = l4util_mb_first_mmap_entry(mbi);  
     (unsigned long)i < (unsigned long)mbi->mmap_addr + mbi->mmap_length;  
     i = l4util_mb_next_mmap_entry(i))
```

Iterate over a memory map provided in a Multiboot info.

#### Parameters

|            |                                                                                                                                               |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <i>i</i>   | Name of a variable of type <a href="#">l4util_mb_addr_range_t</a> * that is consecutively assigned pointers to the entries of the memory map. |
| <i>mbi</i> | Pointer to the <a href="#">l4util_mb_info_t</a> where the memory map can be found.                                                            |

Definition at line 332 of file [mb\\_info.h](#).

#### 17.642.2.2 L4UTIL\_MB\_MEMORY

```
#define L4UTIL_MB_MEMORY 0x00000001
```

Flags to be set in the 'flags' parameter above.

is there basic lower/upper memory information?

Definition at line 344 of file [mb\\_info.h](#).

#### 17.642.2.3 MB\_ART\_MEMORY

```
#define MB_ART_MEMORY 1
```

Address Range Types (ART) from "Advanced Configuration and Power Interface Specification" Rev3.0a (p.

390). Other values are undefined. available, usable RAM

Definition at line 64 of file [mb\\_info.h](#).

## Functions

- `l4_msgtag_t l4_thread_ex_regs (l4_cap_idx_t thread, l4_addr_t ip, l4_addr_t sp, l4_umword_t flags) L4_NOTHROW`

*Exchange basic thread registers.*

- `l4_msgtag_t l4_thread_ex_regs_u (l4_cap_idx_t thread, l4_addr_t ip, l4_addr_t sp, l4_umword_t flags, l4_utcb_t *utcb) L4_NOTHROW`

*Exchange basic thread registers.*

- `l4_msgtag_t l4_thread_ex_regs_ret (l4_cap_idx_t thread, l4_addr_t *ip, l4_addr_t *sp, l4_umword_t *flags) L4_NOTHROW`

*Exchange basic thread registers and return previous values.*

- `l4_msgtag_t l4_thread_ex_regs_ret_u (l4_cap_idx_t thread, l4_addr_t *ip, l4_addr_t *sp, l4_umword_t *flags, l4_utcb_t *utcb) L4_NOTHROW`

*Exchange basic thread registers and return previous values.*

- `void l4_thread_control_start (void) L4_NOTHROW`

*Start a thread control API sequence.*

- `void l4_thread_control_pager (l4_cap_idx_t pager) L4_NOTHROW`

*Set the pager.*

- `void l4_thread_control_exc_handler (l4_cap_idx_t exc_handler) L4_NOTHROW`

*Set the exception handler.*

- `void l4_thread_control_bind (l4_utcb_t *thread_utcb, l4_cap_idx_t task) L4_NOTHROW`

*Bind the thread to a task.*

- `void l4_thread_control_alien (int on) L4_NOTHROW`

*Enable alien mode.*

- `l4_msgtag_t l4_thread_control_commit (l4_cap_idx_t thread) L4_NOTHROW`

*Commit the thread control parameters.*

- `l4_msgtag_t l4_thread_yield (void) L4_NOTHROW`

*Yield current time slice.*

- `l4_msgtag_t l4_thread_switch (l4_cap_idx_t to_thread) L4_NOTHROW`

*Switch to another thread (and donate the remaining time slice).*

- `l4_msgtag_t l4_thread_stats_time (l4_cap_idx_t thread, l4_kernel_clock_t *us) L4_NOTHROW`

*Get consumed time of thread in  $\mu$ s.*

- `l4_msgtag_t l4_thread_vcpu_resume_start (void) L4_NOTHROW`

*vCPU return from event handler.*

- `l4_msgtag_t l4_thread_vcpu_resume_commit (l4_cap_idx_t thread, l4_msgtag_t tag) L4_NOTHROW`

*Commit vCPU resume.*

- `l4_msgtag_t l4_thread_vcpu_control (l4_cap_idx_t thread, l4_addr_t vcpu_state) L4_NOTHROW`

*Enable the vCPU feature for the thread.*

- `l4_msgtag_t l4_thread_vcpu_control_u (l4_cap_idx_t thread, l4_addr_t vcpu_state, l4_utcb_t *utcb) L4_NOTHROW`

*Enable the vCPU feature for the thread.*

- `l4_msgtag_t l4_thread_vcpu_control_ext (l4_cap_idx_t thread, l4_addr_t ext_vcpu_state) L4_NOTHROW`

*Enable the extended vCPU feature for the thread.*

- `l4_msgtag_t l4_thread_vcpu_control_ext_u (l4_cap_idx_t thread, l4_addr_t ext_vcpu_state, l4_utcb_t *utcb) L4_NOTHROW`

*Enable the extended vCPU feature for the thread.*

- `l4_msgtag_t l4_thread_register_del_irq (l4_cap_idx_t thread, l4_cap_idx_t irq) L4_NOTHROW`

*Register an IRQ that will trigger upon deletion events.*

- `l4_msgtag_t l4_thread_modify_sender_start (void) L4_NOTHROW`

*Start a thread sender modification sequence.*

- `int l4_thread_modify_sender_add (l4_umword_t match_mask, l4_umword_t match, l4_umword_t del_bits, l4_umword_t add_bits, l4_msgtag_t *tag) L4_NOTHROW`

*Add a modification pattern to a sender modification sequence.*

- `l4_msgtag_t l4_thread_modify_sender_commit (l4_cap_idx_t thread, l4_msgtag_t tag) L4_NOTHROW`

*Apply (commit) a sender modification sequence.*

- `l4_msgtag_t l4_thread_register_doorbell_irq (l4_cap_idx_t thread, l4_cap_idx_t irq) L4_NOTHROW`

*Register an IRQ that will trigger when a forwarded virtual interrupt is pending.*

## 17.655.1 Detailed Description

Common thread related definitions.

### Macros

- `#define __L4UTIL_THREAD_FUNC(name)`  
*Defines a wrapper function that sets up the registers according to the calling conventions for the architecture.*

## 17.657.1 Detailed Description

Low-level Thread Functions.

Date

1997

Author

Sebastian Schönberg

Definition in file [thread.h](#).

## 17.657.2 Macro Definition Documentation

### 17.657.2.1 \_\_L4UTIL\_THREAD\_FUNC

```
#define __L4UTIL_THREAD_FUNC(  
    name)
```

**Value:**

```
void L4_NORETURN name(void)
```

Defines a wrapper function that sets up the registers according to the calling conventions for the architecture.

Use this as a function header when starting a low-level thread where only stack and instruction pointer are in a well-defined state.

Example:

```
L4UTIL_THREAD_FUNC(helper_thread) { l4_infinite_loop(); }
```

```
thread_cap->ex_regs((l4_umword_t)helper_thread, stack_addr);
```

#include <l4/sys/types.h>

```

Include dependency graph for vbus.h:

This graph shows which files directly or indirectly include this file:

## Enumerations

- enum { `L4VBUS_NULL` = -1L , `L4VBUS_ROOT_BUS` = 0 }
- Constants for device nodes.
- enum `l4vbus_icu_src_types` { `L4VBUS_ICU_SRC_DEV_HANDLE` = 1ULL << 63 }
- Flags that can be used with the ICU on a vbus device.
- enum `L4vbus_dma_domain_assign_flags` { `L4VBUS_DMAD_UNBIND` = 0 , `L4VBUS_DMAD_BIND` = 1 , `L4VBUS_DMAD_L4RE_DMA_SPACE` = 0 , `L4VBUS_DMAD_KERNEL_DMA_SPACE` = 2 }
- Flags for `l4vbus_assign_dma_domain()`.

## Functions

- `L4_BEGIN_DECLS` int `l4vbus_get_device_by_hid` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` parent, `l4vbus_device_handle_t` \*child, char const \*hid, int depth, `l4vbus_device_t` \*devinfo)
- Find a device by the hardware interface identifier (HID).
- int `l4vbus_get_next_device` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` parent, `l4vbus_device_handle_t` \*child, int depth, `l4vbus_device_t` \*devinfo)
- Find next child following *child*.
- int `l4vbus_get_device` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, `l4vbus_device_t` \*devinfo)
- Obtain detailed information about a Vbus device.
- int `l4vbus_get_resource` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, unsigned res\_idx, `l4vbus_resource_t` \*res)
- Obtain the resource description of an individual device resource.
- int `l4vbus_is_compatible` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, char const \*cid)
- Check if the given device has a compatibility ID (CID) or HID that matches cid.
- int `l4vbus_get_hid` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, char \*hid, unsigned long max\_len)
- Get the HID (hardware identifier) of a device.
- int `l4vbus_get_adr` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` dev, `l4_uint32_t` \*adr)
- Get the bus-specific address of a device.
- int `l4vbus_request_ioport` (`l4_cap_idx_t` vbus, `l4vbus_resource_t` const \*res)
- Request an IO port resource.
- int `l4vbus_assign_dma_domain` (`l4_cap_idx_t` vbus, unsigned domain\_id, unsigned flags, `l4_cap_idx_t` dma\_space)
- Bind or unbind a kernel DMA space or a `L4Re::Dma_space` to a DMA domain.
- int `l4vbus_release_ioport` (`l4_cap_idx_t` vbus, `l4vbus_resource_t` const \*res)
- Release a previously requested IO port resource.
- int `l4vbus_vicu_get_cap` (`l4_cap_idx_t` vbus, `l4vbus_device_handle_t` icu, `l4_cap_idx_t` cap)
- Get capability of ICU.

## 17.661.1 Detailed Description

Description of the vbus C API.

Definition in file [vbus.h](#).

## 17.661.2 Enumeration Type Documentation

### 17.661.2.1 anonymous enum

anonymous enum

Constants for device nodes.

#### Enumerator

|                 |                          |
|-----------------|--------------------------|
| L4VBUS_NULL     | NULL device.             |
| L4VBUS_ROOT_BUS | Root device on the vbus. |

Definition at line 20 of file [vbus.h](#).

### 17.661.2.2 l4vbus\_icu\_src\_types

enum [l4vbus\\_icu\\_src\\_types](#)

Flags that can be used with the ICU on a vbus device.

#### Enumerator

|                           |                                                                                                                                                                                                                                                   |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| L4VBUS_ICU_SRC_DEV_HANDLE | Flag to denote that the value should be interpreted as a device handle. This flag may be used in the <code>source</code> parameter in <a href="#">l4_icu_msi_info()</a> to denote that the ICU should interpret the source ID as a device handle. |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### 17.669.1 Detailed Description

This header contains the definition of VBUS sub-interfaces and convenience functions to work with the interface IDs.

Definition in file [vbus\\_interfaces.h](#).

### 17.669.2 Typedef Documentation

#### 17.669.2.1 l4vbus\_iface\_type\_t

```
typedef enum l4vbus\_iface\_type\_t l4vbus\_iface\_type\_t
```

Different sub-interfaces a vbus device may support.

The IPC interface of vbus devices is divided into functional groups of sub-interfaces. Every device must implement the generic interface which provides general device information. According to the type of device, additional functionality may be supported.

The sub-interface constants are first of all used to divide the function opcode space of the interface into these functional groups (see [L4VBUS\\_IFACE\\_SHIFT](#)). They also make up a bitmask that specify the type of the device, i.e. from the point of view of the client a device is defined by the kinds of sub-interfaces it supports.

## 17.669.4 Function Documentation

### 17.669.4.1 l4vbus\_subinterface\_supported()

```
int l4vbus_subinterface_supported (
    l4_uint32_t dev_type,
    l4vbus_iface_type_t iface_type) [inline]
```

Check if a vbus device supports a given sub-interface.

#### Parameters

|                 |                                                              |
|-----------------|--------------------------------------------------------------|
| <i>dev_type</i> | Device type as reported in <a href="#">l4vbus_device_t</a> . |
|-----------------|--------------------------------------------------------------|

|                   |                                  |
|-------------------|----------------------------------|
| <i>iface_type</i> | Sub-interface type to check for. |
|-------------------|----------------------------------|

### Returns

True if the device supports the sub-interface.

Definition at line 99 of file [vbus\\_interfaces.h](#).

### 17.677.1 Detailed Description

This header file contains descriptions of vbus related data types and constants.

Definition in file [vbus\\_types.h](#).

### 17.677.2 Enumeration Type Documentation

#### 17.677.2.1 l4vbus\_device\_flags\_t

enum [l4vbus\\_device\\_flags\\_t](#)

Flags describing device properties, see [l4vbus\\_device\\_t](#).

#### Enumerator

|                                          |                           |
|------------------------------------------|---------------------------|
| <a href="#">L4VBUS_DEVICE_F_CHILDREN</a> | Device has child devices. |
|------------------------------------------|---------------------------|

Definition at line 92 of file [vbus\\_types.h](#).

#### 17.677.2.2 l4vbus\_resource\_flags\_t

enum [l4vbus\\_resource\\_flags\\_t](#)

Description of vbus resource flags.

#### Enumerator

|                                         |                               |
|-----------------------------------------|-------------------------------|
| <a href="#">L4VBUS_RESOURCE_F_MEM_R</a> | Memory resource is readable.  |
| <a href="#">L4VBUS_RESOURCE_F_MEM_W</a> | Memory resource is writeable. |

|                                    |                                                                                                                                                                                                                         |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| L4VBUS_RESOURCE_F_MEM_PREFETCHABLE | Memory resource is prefetchable. Clients may map it buffered or non-cached.                                                                                                                                             |
| L4VBUS_RESOURCE_F_MEM_CACHEABLE    | Memory resource is cacheable. This implies that the memory resource is prefetchable. If not set, clients must not map it cached. If the resource is neither cacheable nor prefetchable, clients must map it non-cached! |
| L4VBUS_RESOURCE_F_MEM_MMIO_READ    | Reading needs to be performed using the MMIO space protocol.                                                                                                                                                            |
| L4VBUS_RESOURCE_F_MEM_MMIO_WRITE   | Writing needs to be performed using the MMIO space protocol.                                                                                                                                                            |

Definition at line 51 of file [vbus\\_types.h](#).

### 17.677.2.3 l4vbus\_resource\_type\_t

```
enum l4vbus_resource_type_t
```

Description of vbus resource types.

#### Enumerator

|                            |                               |
|----------------------------|-------------------------------|

## 17.682.1 Detailed Description

vCPU API

Definition in file [vcpu.h](#).

## 17.682.2 Function Documentation

### 17.682.2.1 l4\_vcpu\_check\_version()

```
int l4_vcpu_check_version (
    l4_vcpu_state_t const * vcpu) [inline]
```

Check if a vCPU state has the right version.

#### Parameters

|             |                                         |
|-------------|-----------------------------------------|
| <i>vcpu</i> | A pointer to an initialized vCPU state. |
|-------------|-----------------------------------------|

#### Return values

|   |                                                                                                          |
|---|----------------------------------------------------------------------------------------------------------|
| 1 | If the vCPU state has a matching version ID for the current vCPU user-level structures.                  |
| 0 | If the vCPU state has a different (incompatible) version ID than the current vCPU user-level structures. |
